SKILLS

- JavaScript
- React JS
- HTML
- CSS
- Basic Java
- OOPS

POWER SKILLS

- Tent to start conversation with others
- Values imaginative and innovation
- Curious to creative

CERTIFICATIONS

- Java Course | Hitbullseye Nov`22
- Frontend full course | Coursera Dec`23

EXTRA CURRICULAR ACTIVITIES

- Volunteer Work – in college Events (Youth Vibe Fest) Apr'23
- The Speech Squad- An Event on Public Speaking Skills Dec'22

PROJECTS

➤ Vaaradi Farms Website Clone Development

- I developed a clone of the Vaaradi Farms website, focusing on an intuitive user experience with dynamic layout design and flexible product displays. The project prioritized fast loading times and smooth navigation for optimal engagement.
- Key features include a product gallery, search and cart functionality, and a scrolling promotional marquee. I used HTML, CSS, and JavaScript to implement clean design and cross-device compatibility.
- The project involved customizing product pages with detailed info and pricing, while enhancing the visual design. Fonts and icons were integrated to match the brand identity, ensuring smooth navigation.

➤ Dynamic Web Portfolio

- This project is a static web portfolio developed using HTML, CSS, and JavaScript. It features a well-organized layout that ensures easy navigation for users. The design focuses on showcasing content clearly and effectively.
- The portfolio includes dynamic elements like typed text effects and hover animations, adding a modern touch. These interactive features enhance user engagement. The overall design reflects creativity and a polished, professional brand.
- Key projects are showcased with images and clear descriptions to enhance visibility. The portfolio features a contact form designed for easy use. While not currently connected to a backend, it serves as a placeholder for future integration.

➤ Travel Planner Application:

- I developed a Travel Planner Application using ReactJS, enabling users to plan itineraries, book flights and hotels, and receive personalized recommendations. The app features a responsive design with Bootstrap, ensuring a seamless experience across devices.
- The backend, built with Spring Tool Suite (STS), managed APIs for user authentication, itinerary handling, and bookings. I used React Router for seamless navigation and JSX components for efficient, maintainable development.
- The project used Vite for fast builds and integrated third-party APIs for flights, accommodations, and weather. Features like offline itineraries and notifications.
